ISM FTP/SFTP Transfer

The IMS FTP/SFTP Transfers is an application that is scheduled in all three IMS environments to transfer program files from and processed files to our partners

Scheduled Windows Tasks

These transfer scripts are confured to run as Windows Scheduled Tasks every 30 min on the hour for inbound and on the 15/45 for outbound.

Current Status

Latest Release: Not releases as of 4/13/2016

How to use

- Windows 7Start -> Control Panel -> Administrative Tools -> Services
- Window Server 2012(right click) Windows Start. Then choose Control Panel

You should see the folders AEG//Transfer. When the "Transfer" folder is selected, the pages are populated

Configuration

• The basic pattern to call the transfer scripts are as follows; <path_to_jar>/transfer.jar \$direction \$partner

```
// Use this to transfer both directions for all partners
example: E:/AEG/scritps/transfer.jar

// Use this to transfer both directions for CleaResult
example: E:/AEG/scritps/transfer.jar both cr

// Use this to transfer inbound directions for AEG
example: E:/AEG/scritps/transfer.jar in aeq
```

The 2 variables that can be dynamically changed; + direction (defaults to both) + partner-name (defaults to non which means all)

If you do not pass a variable for either the scripts defaults to both directions for all partners.

On Demand

You are able to select a scrpt, right click and choose Run to execute the selected script now.
